

TACONIC

TORTILLA & FLAT BREAD PRODUCTION BELTS

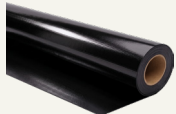

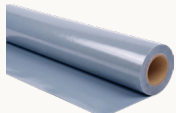

Selecting the right conveyor belt material is critical for consistent, high-quality tortilla and flat bread production. PTFE coated glass fabric offers excellent non-stick and release properties, ensuring smooth product handling and minimal waste.

Its ability to efficiently transfer heat from the platens through the belt plays a key role in achieving uniform cooking, with thinner materials enhancing heat transfer and thicker options providing added durability. High-quality coatings are essential to resist the ingress of fats and oils that can degrade belt performance over time. Colour can also be an important factor, assisting with visual identification and quality control in production environments.

Together, Taconic and Dotmar deliver more than just materials – we deliver complete, application-ready solutions.

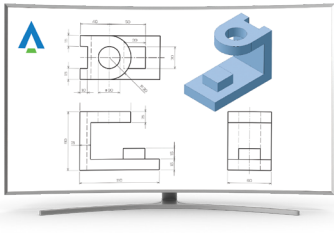

PTFE COATED BELT MATERIALS FOR TORTILLA & FLAT BREAD PRODUCTION

MATERIAL/GRADE	DESCRIPTION	THICKNESS	COLOUR
TacFood 10	TacFood 10 is an economy product designed to deliver excellent value. With a high PTFE content, TacFood 10 is a highly effective solution to produce flour tortillas with a superior release, non-stick surface and increased lifetime.	10 Thou (240 µm)	
7108 FG Black	7108 FG Black is an economy grade food belt with a high PTFE content, seen as a highly effective solution for the production of flour tortillas due to its superior release, non-stick surface and increased lifetime.	10 Thou (230 µm)	
TacFood 11 Light Blue	TacFood 11 Light Blue is the premium belting material with a series of special topcoats to deliver the most effective non-stick surface during tortilla production. Preferred by many OEMs, TacFood 11 Light Blue uses a series of unique coatings to reduce the fat and oil ingress and subsequent discoloration of the belt, thus ensuring a high release belt surface and extended lifetime.	10 Thou (250 µm)	
TL 7100	TL 7100 is a nonporous, red/brown material incorporating 2 plies of a PTFE coated glass fabric to deliver increased dimensional stability on high-speed tortilla production lines whilst facilitating excellent thermal transfer. The high PTFE content of the smooth red top face ensures that TL7100 delivers increased stability, excellent release, and belt lifetime. The slightly textured inside brown face also gives extra grip to the rollers of the tortilla line.	7 Thou	

Belts are custom made in-house to suit individual customer needs and preferences

CAPABILITIES

APPLICATION DEVELOPMENT

Partner with Dotmar's team of experts for end-to-end support—from concept to prototype—using advanced tools like CAMSAD. Our team offers trusted thermoplastics expertise to help reduce risk and ensure reliable results.

TOTAL MACHINING SOLUTIONS

Our expert staff precisely machine a wide range of engineering plastics, including Acetal, Nylon, HDPE, UHMWPE, PEEK, PTFE, PVC, and high-performance materials like PAI, PEI, and PSU.

ISO 9001 compliant manufacturing available on request.

LARGEST SELECTION OF ENGINEERING PLASTICS

Partnering with Dotmar ensures that you have access to an unparalleled range of products from the best brands, and the **most extensive stock inventory across ANZ.**

ABOUT DOTMAR

Quality
ISO 9001
SAI GLOBAL

With a legacy of over 50 years in the plastics industry, Dotmar is the largest distributor of semi-finished engineering thermoplastics and conveyor components throughout Australia and New Zealand.

Our eight machining centres, alongside our full-service injection moulding facility (Dotmar Injection Moulding), combined with a team of skilled engineers and industry experts, enable us to bring your ideas to life—whether it's a single prototype or large-scale production runs.

Dotmar partners with some of the world's most trusted and respected companies and organisations, including the Australian and New Zealand Defence Forces, Coca-Cola, Rio Tinto, Asahi Breweries, Arnott's Group, BHP Billiton, and many more.
